

The My-T Personal Listening System provides clear sound reception from the television or other audio system for people who wear hearing aids fitted with a telecoil (T-coil).

The enjoyment of watching television or listening to music is diminished if one cannot hear the sound clearly. Even if you are wearing a hearing aid, sound is often muffled and distorted. When the volume is turned up to hear better, conflict can occur with others who do not need the increase in volume. This can easily be resolved by using the My-T Personal Listening System.
